

securDoc

Encrypted peer-to-peer file transfer
without limits

Secured Conferencing for Professionals and Regulated Organizations

Secured with End-to-End encryption and Peer-to-Peer communication

Safe File Transfer for Your Enterprise's Most Sensitive Documents & Information

SecurDoc was created to provide most secure way to transfer highly sensitive documents over public internet. Security-first approach with ease of use, no complicated systems anymore!

Virtually any type of file and file size can be transferred with direct connection using peer- to-peer connectivity between multiple users. Every connection is end-to-end encrypted with unique non-repeating encryption key. **SecurDoc** as web application works on all operating system and mobile devices just by using latest web browsers."

SecurDoc is built on the premise of offering high security for sensitive documents transfer leaving u or anybody else unable to read your data...

Advantages of SecurDoc Technology:

- Use of **military grade encryption** standards in all points of communication
- Maximize security of communication
- Keep **privacy** of users at maximum level
- Minimize resources required for infrastructure
- Minimize number of parties involved in **transfer of sensitive data** – using **PEER-TO-PEER** technology
- Easy integration and use, versatility, easy vertical and horizontal scaling
